• Conduct ongoing research into the morphology and dynamics of disk galaxies.	
• Led the development of <i>Spiral Graph</i> , an online citizen science project dedicated to measuring the pitch angle of spiral arms in galaxies.	
2012 – 2013	<b>Visiting Research Associate</b> University of Arkansas at Little Rock, Little Rock, Arkansas
• Investigated the skewness of galaxy bars through simulation modeling in conjunction with photometric and kinematic data.	
2009 – 2012	<b>Postdoctoral Research Fellow</b> Supervised by Associate Dean, Marc S. Seigar University of Arkansas at Little Rock, Little Rock, Arkansas Secondary Affiliation: Arkansas Center for Space and Planetary Sciences University of Arkansas, Fayetteville, Arkansas
• Developed detailed numerical models of the gaseous and stellar components of an unusual barred spiral galaxy.	

- Developed numerical models of the gaseous component of 40 barred spiral galaxies in order to compare observational and theoretical parameters.
- Collaborated in the development of a pipeline script to process and analyze digital multi-waveband images of galaxies.

2008

**Visiting Researcher**

Supervised by [Professor Heikki Salo](#)  
[University of Oulu](#), Oulu, Finland

- Collaborated in the development of numerical models of the gaseous and stellar components of 23 barred spiral galaxies in order to compare observational and theoretical parameters.

- Processed and analyzed digital 1D stellar spectra.
- Processed and analyzed digital near-infrared images of galaxies.
- Used digital images and 2D spectra of galaxies, in conjunction with a sophisticated numerical simulation code, to compare observational and theoretical parameters.
- Developed IDL software for analysis of images, spectra, and simulation models.
- Analyzed digital images and spectra of nearby starburst galaxies to determine the source of escaping Lyman- $\alpha$  radiation.
- Processed and analyzed digital images of galaxies to derive structural parameters for a statistical study.

2002, 2003, 2007
